

## **IS YOUR BUSINESS MISSING OUT ON VALUABLE GREEN FUNDING?**

BUSINESSES in Southampton can access government funding to help them reduce their CO2 emissions.

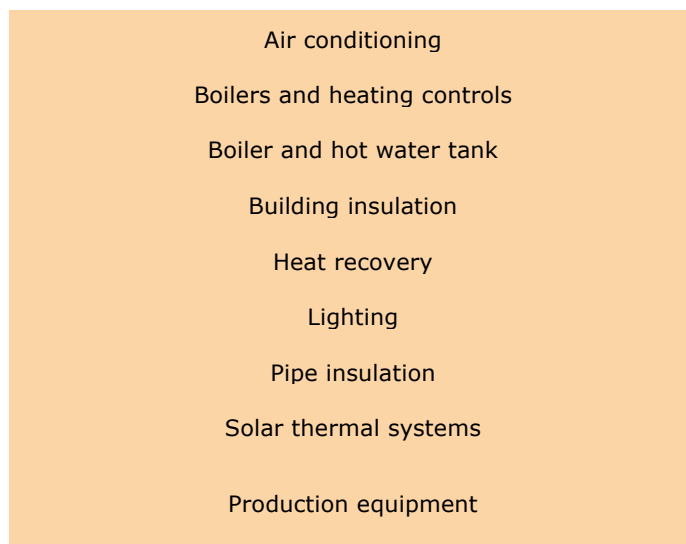

But according to hjs Solutions many SMEs are unaware that the interest free, unsecured loans are available from the Carbon Trust for anything up to £400,000.

Pete Sandhu, Business Development Manager at hjs Solutions said: " According to a recent survey many companies say they are afraid to invest in reducing their carbon footprint because of the cost.

"But with these loans available from the Government backed Carbon Trust, companies can help to tackle climate change."

If your company can identify a "project" that will save energy costs, and reduce CO2 emissions, then potentially you may qualify.

Projects and areas that may qualify include:

There are no arrangement fees, although a credit check is carried out prior to an offer being made. The repayments are made as flexible as possible, with a maximum period of four years available to re-pay the loan.

Mr Sandhu added: "In order to qualify, you will need to assess the CO2 output prior to the project, and then the potential savings and reduction in CO2 emissions that will be achieved with the implementation of the project.

"At hjs Solutions we can help companies with their applications and advise on plant and machinery that may qualify."
